TECHNOLOGIES

Front End

CSS3, Bootstrap, HTML5, JavaScript, React.js, Angular.js, Vue.js

Back End

Ruby, Rails, Sinatra, JavaScript, Node.js, Express

Data Stores

PostgreSQL, MySQL, ElasticSearch, Redis

EXPERIENCE

Slicebooks Store (<https://store.slicebooks.com>)

Application has two services: 1. Store where a user could buy some book or chapter. Also, the user could slice & mix chapters and create new one book. 2. Publishers part. Where publishers could upload their books and slice it to separate chapters.

I worked on the store part and did 100% tasks here.

Technologies

- Back-end - Ruby On Rails
- Database - postgresql
- Search engine - ElasticSearch
- Front-end - AngularJS + CoffeeScript
- Redis + Resque
- Tests - RSpec + Cucumber

Tasks

- Setup env on AWS (nginx + puma, elasticsearch, redis, postgresql, s3)
- Migrate from AWS to DigitalOcean
- Support White Label - stores with custom domains, currency, language, etc. (for example <https://loja.minhabiblioteca.com.br/> it is store on the same platform but for Brazil)
- Separate mobile version. SPA application in angularjs
- Tool for slice and mix chapters (<http://take.ms/ygplt>)
- Elasticsearch. Advanced search and facets (aggregations)
- Payment with Stripe, PayPal, Brazil bank, etc.

HouseAcct (<https://houseacct.com/>)

Marketplace. This store also supports custom shops with domains.

Technologies

- Back-end - Ruby On Rails
- Database - postgresql
- Front-end - AngularJS and ReactJs
- Redis + Sidekiq
- Tests - RSpec + Selenium

Tasks

- Integration with third-party POS services for import product metadata and export quantity (Shopify, Lightspeed, Spreengboard)
- Migrate admin area from Angular na React.js
- Change product structure and form to create a new product. Add: multicolor, custom sizes, multi photos, discounts
- A lot of some small stories like: promo codes, migrate to Stripe, calculate tax and shipping price

Shoptiques (<https://www.shoptiques.com/>)

Marketplace

Technologies

- Back-end - Node.js (express + sequelize)
- Database - postgresql
- Front-end - ReactJs

Tasks

- Form for creating new products (React.js, Slim, Scss)
- On create new product user could search product by SKU in HouseAcct database and get all metadata
- New experience with node.js (add simple RestApi CRUD methods)

GlassFactory (<https://glassfactory.io/>)

Task management system with next features: track time, plan members with gand diagram, create invoices for customers.

Technologies

- Back-end - Ruby On Rails
- Database - postgresql
- Front-end - AngularJS and ReactJs
- Redis + Sidekiq
- Tests - RSpec + Selenium

Tasks

- Migrate from Angular + CoffeeScript to React + ES6
- Advanced report system. Members utilization, rates + costs, etc. Filters by clients, projects, member roles, etc.
- Drag & Drop gand diagram plan tool.
- Time tracking system.
- RestApi for mobile and desktop clients.
